MOBILITY ENGINEERING

Driving Solutions
eConnect (Push/Pull)

The Veigel **eConnect** Push/Pull is an advanced electronic hand control system designed to seamlessly integrate with modern vehicle technology. Engineered for intuitive operation, it replaces traditional mechanical linkages with smooth electronic acceleration and braking, delivering a more refined and responsive driving experience.

The Push/Pull design provides familiar control - push to brake and pull to accelerate - enhanced by precise electronic input for improved comfort and confidence behind the wheel.

To suit individual preferences, the **eConnect** Push/Pull is available with a choice of ergonomic grips, including the Basic Grip, V-360 Grip, and Premium Grip with integrated functions such as horn and indicators. This ensures a tailored solution that prioritises usability, safety, and driving enjoyment in one innovative system.
